

WHITEPAPER

Independent USDT ERC-20 Project — Version 1.0 | 28 August 2026

Token Name	Tether USDT
Symbol	USDT
Blockchain	Ethereum Mainnet
Standard	ERC-20
Decimals	6
Total Supply	10,000,000 USDT
Contract Address	0x596597498db0533e41ef012f688f12df76a3bf3a

IMPORTANT BRAND & RISK NOTICE: This document describes an independent ERC-20 token project. The token uses the name “Tether USDT” and symbol “USDT”, but it is not the official Tether USD₯ token and is not represented here as issued, sponsored, guaranteed or redeemable by Tether Holdings Limited. Users must verify the contract address before interacting with the token.

1. Executive Summary

The project is an Ethereum-based ERC-20 token initiative designed to provide a transferable digital token, support on-chain community participation, and enable integration with compatible decentralized applications and liquidity venues. The project emphasizes transparent contract identification, technical maintenance and responsible disclosure.

2. Project Objectives

- Maintain a technically functional ERC-20 token on Ethereum Mainnet.
- Promote transparent identification through the exact smart-contract address.
- Develop community, market and business partnerships without misrepresenting third-party affiliations.
- Improve liquidity, discoverability and wallet/DEX metadata through legitimate platform processes.
- Maintain clear disclosures concerning token risks, administration and any reserve claims.

3. Token Specifications

Name	Tether USDT
Ticker	USDT
Standard	ERC-20
Network	Ethereum Mainnet
Decimals	6
Total Supply	10,000,000 USDT
Contract	0x596597498db0533e41ef012f688f12df76a3bf3a
Transfer Tax	0% buy / 0% sell (project specification)

4. Smart Contract and Administration

The contract provides standard ERC-20 transfer and approval functionality. Project records indicate administrative functionality including ownership controls and mint/burn capability. Because administrative privileges can materially affect token risk, users should review the verified contract source and current on-chain ownership state before relying on the token.

5. Supply and Distribution

The stated total supply for this version of the project is 10,000,000 USDT with 6 decimals. Any holder distribution, treasury allocation, liquidity allocation or future supply changes should be reported from current on-chain data rather than assumed from this whitepaper.

6. Liquidity and Price Discovery

The project may use decentralized exchanges and liquidity pools for market access and price discovery. Liquidity-provider positions do not guarantee a fixed token price, continuous liquidity or redemption at any particular value. Market price can deviate materially from any target or reference price.

7. Reserve and Backing Policy

No claim of 1:1 U.S.-dollar backing is made in this whitepaper. Any future claim that assets support the project must identify the asset type, amount, custodian, valuation date and evidence. A company support letter or collaboration certificate alone is not proof of reserves. Reserve statements should be updated when underlying evidence changes.

8. Strategic Collaboration

The project may enter strategic collaboration arrangements with third parties such as ARWOOD LLC. Such arrangements can cover business development, networking, technical cooperation and market development. Unless a signed agreement expressly states otherwise, a collaborator does not guarantee token value, liquidity or redemption.

9. Security

- Verify the exact contract address before transfers or swaps.
- Use reputable wallets and decentralized applications.
- Review contract permissions, owner privileges and mint capability.
- Treat approvals and signatures as security-sensitive actions.
- Do not assume that a familiar token name or logo proves authenticity.

10. Compliance

Participants are responsible for compliance with laws applicable in their jurisdictions. The project should maintain truthful marketing, avoid misleading stablecoin or reserve representations, respect third-party trademarks, and apply appropriate AML/KYC or sanctions controls where required by the activities undertaken.

11. Risk Factors

- Smart-contract and administrative-key risk.
- Liquidity and market-price volatility.
- Wallet, DEX or data-provider delisting or warning labels.
- Regulatory and legal uncertainty across jurisdictions.
- Brand-confusion and intellectual-property risk arising from use of the name or symbol of an established asset.
- Counterparty risk in partnerships, custody, liquidity and reserve arrangements.
- Cybersecurity, phishing and private-key compromise.

12. Roadmap

- Phase 1 — Contract deployment, verification and baseline liquidity.
- Phase 2 — Metadata, wallet/DEX discoverability and community development.
- Phase 3 — Strategic collaborations and broader market outreach.
- Phase 4 — Stronger transparency reporting, security review and evidence-based reserve disclosures if applicable.

13. Disclaimer

This whitepaper is informational and does not constitute investment advice, an offer of securities, a promise of profit, a bank deposit, a guarantee of redemption or a representation that the token is official Tether USD[®]. Digital assets can lose value. Users should conduct independent legal, technical and financial due diligence.

14. Project Identification

Project	Independent USDT ERC-20 Project
Token Contract	0x596597498db0533e41ef012f688f12df76a3bf3a
Strategic Collaborator	ARWOOD LLC
ARWOOD Registration No.	00102938
ARWOOD Email	megamixarmenian@gmail.com

Company B / Project Entity: Ideh Afarinan Masoun Bouali, Registration No. 15899, Urmia, West Azerbaijan Science and Technology Park, Iran

Proposed ARWOOD LLC support: USD 1,000,000, subject to signed approval and verifiable reserve evidence. Until such evidence is attached, this amount must not be represented as a confirmed reserve or 1:1 backing.
